Objective:
Understand and learn the Rapid-Flow Filling of the root canal system with plasticized gutta-percha without cones or solvents. This includes the use of necessary materials including NiTi instrumentation, irrigation, apex locators, the Obtura, and appropriate condensation.

Description:
Learn this three dimensional technique using the Obtura with correct selection of needles, proper canal preparation with .06 series 29 Profiles and Protapers, apex locators, selection and consistency of correct gutta-percha, proper sealer mix, and condensation of the gutta-percha. How these materials are consistent with proper canal design and obturation will be discussed and a canal preparation and filling will be completed.

Participants to bring:
Extracted bicuspids with the crown cut off at the CEJ, as well as gloves of their preference.
